

BUILDING BRIDGES

Chief Optimization Officer: Shattering the Status Quo

available at 

Instructions

As you begin to build the bridge, you can do this in 4 big steps:

- 1) Capture a statement or a couple sentences that state where you are today (Current State) .
- 2) Capture a statement or a couple sentences that state where you want to be (Future State).
- 3) List out all the actions , processes, systems you need to create and implement to get you from the Current State to the Future State.
- 4) Put the sticky -notes in the order you would need to implement them to get to the future state.

** Optimization Tips:

- Capture the actions in the matrix on the 2nd page if necessary.
- Use sticky -notes or a Miro board to capture one item on each.
- Review the sticky -notes and order at a consistent frequency to add/adjust based on what you are learning on the journey.

Current State	
Future State
